

Product Showcase at Broadcast Asia 2009

As the industry buzz on Broadcast Asia 2009 is turning more heads and reminders on mobile phones and PCs keep on popping up as 16 June is fast approaching, professional equipment distribution company Broadcast Professional Pte Ltd (BP) is equally anticipative of the event as it is preparing for its live demonstration of **Studer Vista 5 SR** and **WinMedia 2.9** at the show.

Studer Vista 5 SR is an industry standard mixing console, which functionalities transcend broadcast and fixed install to tour sound applications. **WinMedia 2.9** is the next generation software of the revolutionary WinMedia 2.8, a radio automation system that simplifies all broadcast processes: editing, music and ads scheduling, voice tracking, live assist, statistics, reports and billing, Internet streaming, archiving and report.

For BP, to allow its loyal and potential customers feel the radio environment in its booth at **8K4-06 and 8L4-05-1** is to let them 'experience' the value of Studer and WinMedia products to their business.

BP will also showcase 2U high-quality video/ audio monitor **Bel AV2-8SHD** and the new **Neutrik opticalCON QUAD**, another industry standard that answers broadcast industry's dilemma on high bandwidth requirements of HD video displays and limited copper connectivity.

Come and see us at Booth 8K4-06 and 8L4-05-1 at Broadcast Asia 2009, from 16 to 19 June, Singapore Expo!
